Multiactivity playequipment

The majority of Lappset's multi-activity centres can be equipped with a slide which best suits your needs. There are three materials and shapes. When selecting a slide for your product, think about the main user group. Which slide should you have in your playground to set the imagination soaring and spark delight from one day to the next?

The surrounding conditions should be kept in mind when choosing the slide material. In warmer climates, under

direct sunlight, plastic slides will not get too hot for sliding. If the park equipment is for rougher than average use, high pressure laminate is recommended instead of wood or plastic.

The Tube is a unique product in Lappset's product range. Because the Tube is assembled out of modules, it can be made into nearly any shape. It can also include transparent parts. Thanks to its modular structure, the Tube also rises higher than other slides.

RECO

Recycled structures

L'attrezzatura da gioco RECO ha una struttura in materiale composito, realizzato in materiali plastici riciclati al 100%.

Un'alternativa molto solida e durevole ad altre soluzioni per parchi giochi ben note, che richiede solo una manutenzione minima.

Con le attrezzature per parchi giochi della serie RECO è ora possibile scegliere un parco giochi più sostenibile, realizzato con materie prime a ridotte emissioni di CO2
